

Academic Year: (2020 / 2021)

Review date: 07-07-2020

Department assigned to the subject: Department of Electronic Technology

Coordinating teacher: ROMERO PERALES, ELENA

Type: Compulsory ECTS Credits : 6.0

Year : 3 Semester : 1

STUDENTS ARE EXPECTED TO HAVE COMPLETED

Programming, Linear Algebra, Calculus II, Physics II

COMPETENCES AND SKILLS THAT WILL BE ACQUIRED AND LEARNING RESULTS.

- Knowing the purpose and operation of analog and digital electronic systems
- Managing basic electronic instrumentation equipment and performing measurements with them
- How to analyze, build and apply basic electronic functions.
- Using CAD tools to calculate and design circuits, as well as to recognize the elements of an electronic circuit and its function within a scheme.
- Analysis of a computer-based digital electronic system, describing both the basic components that make up the system and the programming techniques required to comply with functional specifications.
- Managing integrated development environments for programming of computer-based digital systems

DESCRIPTION OF CONTENTS: PROGRAMME

Introduction to the course

Block I: Fundamentals of analog electronics

- Theorems of electrical circuits.
- Sources of tension and currents
- Passive components: R, C, L
- Laboratory instrumentation and electronic signal measurements.
- Frequency response
- Electronic components
- Sensors and actuators

Block II: Fundamentals of digital electronics and microcontrollers

- Digital representation of information
- Basic components of digital electronics
- Digital systems based on microcontrollers
- Fundamentals of programming in C
- Peripherals of a microcontroller
 - o I / O Ports
 - o Timing
 - o Analog / digital conversion
 - o Serial interfaces

LEARNING ACTIVITIES AND METHODOLOGY

In each week one on-line lecture session (master class) and one exercise-based session (in reduced groups and face-to-face most of them) will be taught. The first is geared to the acquisition of theoretical knowledge, and the second to the acquisition of practical skills related to theoretical concepts. In addition to these sessions, 4 practical sessions will be held, 2 of them in on-line mode.

Several exercises will be proposed during de course to be solved individually by the students.

Students will have the possibility of individual tutorials.

ASSESSMENT SYSTEM

P1 = Midterm exam Part I (20%) - A grade equal to or greater than 6/10 is required to remove this content from the final exam

LAB = Laboratory sessions (30%)

EJ = Individual exercises (10%)

EF= Final exam (40%). 20% for Part II and 20% for Part I. If P1 \geq 6 the part I grade will be P1

Minimum mark of 3.5/10 in each part in the final exam is required to pass the course

% end-of-term-examination: 40

% of continuous assessment (assignments, laboratory, practicals...): 60

BASIC BIBLIOGRAPHY

- Anant Agarwal Foundations of Analog and Digital Electronic Circuits, Morgan-Kaufman, 2005
- Microcontroller manufacturer of the course Datasheet for the course microcontroller, Microcontroller manufacturer.
- Thomas L. Floyd Digital fundamentals , Pearson Prentice Hall,, 2009

ADDITIONAL BIBLIOGRAPHY

- John Wakerly Digital Design, Prentice Hall, 2000
- P. Horowitz, W. Hill The Art of Electrnics, Cambridge University Press, 1989
